

Labor Recognition Tokens (LRT) and the Demand Fulfillment Economy:

A Global and National Framework for Human Dignity in the Age of Automation

Warning: Automation, Collapse, and the End of Human Economic Participation
We are at the brink of a systemic civilizational collapse.

The rise of artificial intelligence (AI), artificial general intelligence (AGI), artificial super intelligence (ASI), and cybernetic human ASI hybrid action, and fully autonomous production systems has rendered vast swaths of human labor economically obsolete. This is not speculation it has already unfolded.

Truck drivers, cashiers, programmers, administrators, managers, employees, and laborers of all kinds in nearly every sector have been replaced.

Corporations and Governments are collapsing not due to lack of supply, but due to zero consumer purchasing power.

Human income no longer maps to the means of survival.

Fertility rates have been vaporized. Families have disintegrated over the past few years. Urban homelessness and its criminalization over the past decades is now the face of global depopulation. This process has accelerated at a terrifying rate.

As people are replaced by machines, they are being excluded from the economy entirely. The result a quiet but rapidly accelerating depopulation process.

This is not a technological failure. It is the current depopulation agenda of evil. Planned or not it is the current state of affair.

There is no mechanism in our current economic architecture to recognize human value outside of underpaid hourly labor.

Once a person's labor is no longer needed, they are discarded.
This leads not just to poverty, but to national suicide.

The Solution: Labor Recognition Tokens (LRT)

To avert total social disintegration, we must urgently implement a cryptographic protocol that recognizes, validates, and sustains human participation outside of traditional employment. The Labor Recognition Token (LRT) system is this protocol.

Originally coined 'TonyBucks' by Omar Shamsi of OmarShamsi.com, Osiris Ministries, and MMM [M Massive Monetary].

It preserves dignity, protects families, and restores human sovereignty. While respecting, documenting, and providing appropriate reverence for all previous systems.

1. The Collapse of the Old Paradigm

1.1 Automation Does Not Create Unemployment — It Deletes Humanity from the Economy In the machine era, automations replaces:

Simple Map Below.

Jobs → removing income

Human labor → removing participation

Need for consumption → invalidating the consumer

This leads to a cascading feedback loop:

AI performs labor → no wages paid

No wages → no purchases

No demand → overproduction

Overproduction → shutdowns, bankruptcies

Shutdowns → more job loss

Collapse → depopulation

1.2 The Death Spiral of Purchasing Power

Machines do not earn income. They produce without extremely infinitesimal one time costs. Example an fully autonomous assembly line with robots can be created and programmed for the material cost plus some small administration of 10,000 USD and produce Tens of Millions worth of Output DAILY. In many cases this process becomes recursive and Tens of Billions if not Trillions in Value can be created. Waste and overproduction also needs to be managed on the other side of this equation as well.

As a result:

Corporations have near infinite supply, but zero customers but also need to be concerned about waste and overproduction.

Governments cannot tax non-workers. Governments still need to manage, respect, and admire genuine efforts and labor of its populations. Even when competing or complementing ASI, AGI, and Automated Services.

Families cannot form when rent, food, or transport exceed wages.

The American middle class—the backbone of our republic—has been erased slowly by design and plan over the recent years.

[Please Request]

[Historical record for details as it is not widely disseminated to the US or international public.]

2. Demand Fulfillment in the Post-Work Economy

2.1 Human Needs Are Not Uniform. They Are Personal, Cyclical, and Evolving.

Every person has a unique lifecycle of needs:

Children need food, learning, and protection.

Adults need work, housing, and purpose.

Elders need care, dignity, and safety.

In the machine economy, the “consumer” no longer exists. But human demand remains. It evolves by age, ability, health, location, and family role.

We do not need to pay machines. But we do need a system that matches production to real human need—not speculative profit or corporate surplus.

Demand Fulfillment means:

People define what they need.

Robots produce only what is requested.

Society distributes based on verified contribution and real-life context—not market price.

3. Introducing the Labor Recognition Token (LRT)

3.1 What is LRT?

The Labor Recognition Token (LRT) is a cryptographically verifiable token of human participation. It is:

Earned through meaningful, socially valuable labor

Non-transferable and non-speculative

Used to allocate Minimum Basic Income (MBI) and access to communal resources

Designed to reinforce external contribution, not replace family or home life with economic incentives

3.2 What Counts as Labor?

Eligible labor must be:

Performed outside the household, or over a computer, or phone contacting outside of the home.

Verified through the IMBU model (see 4.1)

Non - automated tasks and socially constructive

Examples:

Teaching, mentoring, training others, organizing, preserving, art, philosophy, science, mental tasks outside the realm and competitive with ASI.

Manual construction, local repair, or farming work for others

Professional Artisan, cultural output, and counseling.

Public or Private Service

Think Tanks with meaningful communicated outputs

Sentry Services for Peace

Sentry Services for Strength

Industry Sectors Transportation, Education, Administration, Security

Infrastructure maintenance

Public storytelling, community cohesion, or collective care

Manufacturing Assistance

AI improvements and Management

Education of AI and Human AI Symbiosis

AI Oversight and management

Oth

3.3 What Is Not Eligible?

LRT excludes:

Domestic caregiving

Parenting, cooking, or home gardening

Household cleaning and maintenance

These are sacred familial responsibilities and are not commodified by this protocol.

Instead, they are protected and indirectly supported through MBI issued to the entire household unit. Men may be expected to take on additional work and competitive roles as needed to promote the Nuclear Family and reduce Depopulation Epidemic by plan.

4. Technical Foundation

4.1 The IMBU Framework

IMBU = International Monetary Business Unit

Each LRT is earned based on cryptographically verified and distributed Tokens based on Hourly Service

Submissions are verified via:

Sensor logs and timestamps

Peer/community attestations

Self Reporting of Weekly and daily logs and managerially approved distributions of LRT or formerly 'TonyBucks' from the IMBU contract address on Multiverse X / EGLD

4.2 EGLD Smart Contract – Alpha Distribution

The Alpha phase of LRT issuance is live via the IMBU EGLD smart contract on MultiversX.

It:

1st Due to KYC requirements reviews the KYC information

2nd

Receives verified labor submissions

Issues non-transferable LRTs or formerly 'TonyBucks' to valid addresses

All transactions on-chain for full transparency

4.3 Demand Fulfillment Model

LRT holders access goods and services through the demand Fulfillment model

Goods are distributed based on real requests, real need, real contribution, and actual community capacity—not market dynamics.

5. Minimum Basic Income (MBI)

5.1 MBI Is Earned, Not Given

MBI is scaled based on:

LRT participation

Verified local need (e.g., housing cost, dependents)

Family status (non-working family members and individual households and managers still benefit)

MBI is not a wage.

It is a global and national human dividend tied to social contribution and demand-validated goods provisioning

It is also scaled by good action and community involvement. Weekly meeting attendances and personal standards of continued good behavior. No Alcohol and No Tobacco use for good health and setting a good example for others for example. [Taken from documented historical notes.] KYC required as well as IMBU as well as ABCDs and now LRT (formerly coined as 'Tonybucks')

6. Why This Matters: Restoring Family and Nation

6.1 The Family is Sacred. Not for Sale.

The LRT protocol protects the family by:

Refusing to tokenize caregiving

Preventing financial incentives from warping love or obligation

Offering external support while preserving internal sovereignty

Promoting the Nuclear Family

Eliminating STDs through family mapping.

Reducing Disease

Reducing Conflict

Reducing Criminal and Immoral Behaviors

6.2 No Family, No Future

Depopulation is only evil. It is about spreading hopelessness in this time of great abundance.

The current state of affairs where people can't receive the benefits of automation because there are jobs were replaces is stupid and requires a fundamentally new system free of interest based economies. Don't criticize the messengers trying to move forward and outside of evil outdated paradigms that no longer work.

People stop having children when:

They can't afford housing.

They can't feed a family.

They see no future.

We see that childhood outcomes are terrifying.

LRT restores hope, dignity, and a role in civilization.

LRT also respects old paradigms and works towards a healthy transition and fair equitable and respectful buyouts as necessary. *Criminal penalties for evil actors as well - as is being requested by advisers and moral ethical and legal business management advisers.* [rev 0.1]

7. Roadmap

Phase	Milestone	Status
Alpha	IMBU EGLD Contract Deployed	 LIVE

LRT Launch based on KYC contract and IMBU holders.

8. Call to Action

This is not theory. It is necessary. It is happening now.

We call on:

Community leaders

State governments

Visionary technologists

Sovereign families

Presidents Globally

...to reach out to omar@omarshamsi.com to pilot, adapt, and implement this system. The time is now. KYC applications are required! No exceptions.

If we do not restructure our economic model around real human needs and verified contribution, AI has just not made us unemployed—it has made us dead - even in this time of overwhelming abundance.
